CPL
CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 94 (1998)

Alcohol-lipid membrane interaction; Isothermal microcalorimetry; Hexanol; Partition coefficient; Interdigitation; Dimyristoylphosphatidylcholine liposomes; Hydrophobic effect **94**, 119

Branched chains; Phospholipids; Monolayers; Thermodynamics; Structures; X-ray investigations **94**, 251

Calcium; Phase behaviour; Cholesterol; Membrane fusion; FT-IR spectroscopy; X-ray diffraction **94**, 97

Calorimetry; *Thermoplama acidophilum*; Tetraether lipid; Differential thermoanalysis **94**, 1

Carboxyfluorescein release; Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Permeability alterations and bilayer solubilization; Static light-scattering changes; Effective surfactant to lipid molar ratios; Surfactant partition coefficients **94**, 71

Carboxyfluorescein release; Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Influence of ceramides in stratum corneum lipid liposomes alterations; Surfactant/stratum corneum lipid molar ratios; Surfactant partition coefficients **94**, 181

Chainlength dependence; *N*-acylethanolamine; Phase transition; Transition enthalpy; Transition entropy; Differential scanning calorimetry; Lipid membrane **94**, 43

Cholesterol; Phase behaviour; Calcium; Membrane fusion; FT-IR spectroscopy; X-ray diffraction **94**, 97

Cholesterol; ^{31}P-NMR; Lipid polymorphism; Gangliosides; Lipid monolayers **94**, 109

^{13}C NMR spectroscopy; 2D HSQC-TOCSY sequences; Spin-lattice relaxation times; n-3 *trans* fatty acids; DHA; EPA **94**, 239

Crepenyic acid; Mass spectrometry; Fatty acids **94**, 35

DHA; ^{13}C NMR spectroscopy; 2D HSQC-TOCSY sequences; Spin-lattice relaxation times; n-3 *trans* fatty acids; EPA **94**, 239

2D HSQC-TOCSY sequences; ^{13}C NMR spectroscopy; Spin-lattice relaxation times; n-3 *trans* fatty acids; DHA; EPA **94**, 239

Diacetylene; Giant vesicles; Phospholipid; Tubule; Optical microscopy **94**, 53

Differential scanning calorimetry; *N*-acylethanolamine; Phase transition; Transition enthalpy; Transition entropy; Chainlength dependence; Lipid membrane **94**, 43

Differential thermoanalysis; *Thermoplama acidophilum*; Tetraether lipid; Calorimetry **94**, 1

Dimyristoylphosphatidylcholine liposomes; Isothermal microcalorimetry; Hexanol; Partition coefficient; Alcohol-lipid membrane interaction; Interdigitation; Hydrophobic effect **94**, 119

Dipalmitoyl phosphatidylcholine; Subtransition; Pretransition; Infrared spectroscopy; Order parameter **94**, 13

DNA; Liposomes; Phase transition; DSC **94**, 139

DSC; Liposomes; DNA; Phase transition **94**, 139

Effective surfactant to lipid molar ratios; Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Permeability alterations and bilayer solubilization; Carboxyfluorescein release; Static light-scattering changes; Surfactant partition coefficients **94**, 71

EPA; ^{13}C NMR spectroscopy; 2D HSQC-TOCSY sequences; Spin-lattice relaxation times; n-3 *trans* fatty acids; DHA **94**, 239

EPR; Low-density lipoprotein; Oxidation; Oxygen consumption; α-Tocopherol **94**, 63

PII S0009-3084(98)00074-7

Fatty acids; Mass spectrometry; Crepenyic acid **94**, 35

Film balance; HIV envelope glycoprotein; Lipid monolayers; Lipid–peptide interaction **94**, 81

Fluorescent labeled glycerophospholipids; Immobilized glycerophospholipids; Friedel–Crafts reaction **94**, 193

Fluorinated analog; 7-Ketocholesterol; Oxidation **94**, 209

Fourier-transform infrared spectroscopy; Sulfogalactosylceramide; Phosphatidylcholine; Liposomes; Lipid interaction **94**, 227

Friedel–Crafts reaction; Fluorescent labeled glycerophospholipids; Immobilized glycerophospholipids **94**, 193

FT-IR spectroscopy; Phase behaviour; Calcium; Cholesterol; Membrane fusion; X-ray diffraction **94**, 97

Gangliosides; ^{31}P-NMR; Lipid polymorphism; Cholesterol; Lipid monolayers **94**, 109

Giant vesicles; Diacetylene; Phospholipid; Tubule; Optical microscopy **94**, 53

Hexanol; Isothermal microcalorimetry; Partition coefficient; Alcohol-lipid membrane interaction; Interdigitation; Dimyristoylphosphatidylcholine liposomes; Hydrophobic effect **94**, 119

HIV envelope glycoprotein; Lipid monolayers; Film balance; Lipid–peptide interaction **94**, 81

Hydrophobic effect; Isothermal microcalorimetry; Hexanol; Partition coefficient; Alcohol-lipid membrane interaction; Interdigitation; Dimyristoylphosphatidylcholine liposomes **94**, 119

Immobilized glycerophospholipids; Fluorescent labeled glycerophospholipids; Friedel–Crafts reaction **94**, 193

Influence of ceramides in stratum corneum lipid liposomes alterations; Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Carboxyfluorescein release; Surfactant/stratum corneum lipid molar ratios; Surfactant partition coefficients **94**, 181

Infrared spectroscopy; Subtransition; Pretransition; Order parameter; Dipalmitoyl phosphatidylcholine **94**, 13

Interdigitation; Isothermal microcalorimetry; Hexanol; Partition coefficient; Alcohol-lipid membrane interaction; Dimyristoylphosphatidylcholine liposomes; Hydrophobic effect **94**, 119

Isothermal microcalorimetry; Hexanol; Partition coefficient; Alcohol-lipid membrane interaction; Interdigitation; Dimyristoylphosphatidylcholine liposomes; Hydrophobic effect **94**, 119

7-Ketocholesterol; Fluorinated analog; Oxidation **94**, 209

Lipid interaction; Sulfogalactosylceramide; Phosphatidylcholine; Liposomes; Fourier-transform infrared spectroscopy **94**, 227

Lipid membrane; *N*-acylethanolamine; Phase transition; Transition enthalpy; Transition entropy; Chainlength dependence; Differential scanning calorimetry **94**, 43

Lipid monolayers; HIV envelope glycoprotein; Film balance; Lipid–peptide interaction **94**, 81

Lipid monolayers; ^{31}P-NMR; Lipid polymorphism; Gangliosides; Cholesterol **94**, 109

Lipid–peptide interaction; HIV envelope glycoprotein; Lipid monolayers; Film balance **94**, 81

Lipid polymorphism; ^{31}P-NMR; Gangliosides; Cholesterol; Lipid monolayers **94**, 109

Liposomes; DNA; Phase transition; DSC **94**, 139

Liposomes; Sulfogalactosylceramide; Phosphatidylcholine; Fourier-transform infrared spectroscopy; Lipid interaction **94**, 227

Low-density lipoprotein; EPR; Oxidation; Oxygen consumption; α-Tocopherol **94**, 63

Mass spectrometry; Fatty acids; Crepenyic acid **94**, 35

Membrane fusion; Phase behaviour; Calcium; Cholesterol; FT-IR spectroscopy; X-ray diffraction **94**, 97

Monolayers; Phospholipids; Branched chains; Thermodynamics; Structures; X-ray investigations **94**, 251

***N*-acylethanolamine**; Phase transition; Transition enthalpy; Transition entropy; Chainlength dependence; Differential scanning calorimetry; Lipid membrane **94**, 43

***N*-dodecyl-*N*,*N*-dimethylbetaine**; Phosphatidylcholine liposomes; Permeability alterations and bilayer solubilization; Carboxyfluorescein release; Static light-scattering changes; Effective surfactant to lipid molar ratios; Surfactant partition coefficients **94**, 71

n-3 *trans* fatty acids; ^{13}C NMR spectroscopy; 2D HSQC-TOCSY sequences; Spin-lattice relaxation times; DHA; EPA **94**, 239

Optical microscopy; Giant vesicles; Diacetylene; Phospholipid; Tubule **94**, 53

Order parameter; Subtransition; Pretransition; Infrared spectroscopy; Dipalmitoyl phosphatidylcholine **94**, 13

Oxidation; EPR; Low-density lipoprotein; Oxygen consumption; α-Tocopherol **94**, 63

Oxidation; 7-Ketocholesterol; Fluorinated analog **94**, 209

Oxygen consumption; EPR; Low-density lipoprotein; Oxidation; α-Tocopherol **94**, 63

Partition coefficient; Isothermal microcalorimetry; Hexanol; Alcohol-lipid membrane interaction; Interdigitation; Dimyristoylphosphatidylcholine liposomes; Hydrophobic effect **94**, 119

Permeability alterations and bilayer solubilization; Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Carboxyfluorescein release; Static light-scattering changes; Effective surfactant to lipid molar ratios; Surfactant partition coefficients **94**, 71

Phase behaviour; Calcium; Cholesterol; Membrane fusion; FT-IR spectroscopy; X-ray diffraction **94**, 97

Phase transition; Liposomes; DNA; DSC **94**, 139

Phase transition; *N*-acylethanolamine; Transition enthalpy; Transition entropy; Chainlength dependence; Differential scanning calorimetry; Lipid membrane **94**, 43

Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Permeability alterations and bilayer solubilization; Carboxyfluorescein release; Static light-scattering changes; Effective surfactant to lipid molar ratios; Surfactant partition coefficients **94**, 71

Phosphatidylcholine; Sulfogalactosylceramide; Liposomes; Fourier-transform infrared spectroscopy; Lipid interaction **94**, 227

Phospholipid; Giant vesicles; Diacetylene; Tubule; Optical microscopy **94**, 53

Phospholipids; Branched chains; Monolayers; Thermodynamics; Structures; X-ray investigations **94**, 251

^{31}P-NMR; Lipid polymorphism; Gangliosides; Cholesterol; Lipid monolayers **94**, 109

Pretransition; Subtransition; Infrared spectroscopy; Order parameter; Dipalmitoyl phosphatidylcholine **94**, 13

Sodium dodecyl sulfate; Stratum corneum lipid liposomes; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Influence of ceramides in stratum corneum lipid liposomes alterations; Carboxyfluorescein release; Surfactant/stratum corneum lipid molar ratios; Surfactant partition coefficients **94**, 181

Spin-lattice relaxation times; ^{13}C NMR spectroscopy; 2D HSQC-TOCSY sequences; n-3 *trans* fatty acids; DHA; EPA **94**, 239

Static light-scattering changes; Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Permeability alterations and bilayer solubilization; Carboxyfluorescein release; Effective surfactant to lipid molar ratios; Surfactant partition coefficients **94**, 71

Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Influence of ceramides in stratum corneum lipid liposomes alterations; Carboxyfluorescein release; Surfactant/stratum corneum lipid molar ratios; Surfactant partition coefficients **94**, 181

Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Influence of ceramides in stratum corneum lipid liposomes alterations; Carboxyfluorescein release; Surfactant/stratum corneum lipid molar ratios; Surfactant partition coefficients **94**, 181

Structures; Phospholipids; Branched chains; Monolayers; Thermodynamics; X-ray investigations **94**, 251

Subtransition; Pretransition; Infrared spectroscopy; Order parameter; Dipalmitoyl phosphatidylcholine **94**, 13

Sulfogalactosylceramide; Phosphatidylcholine; Liposomes; Fourier-transform infrared spectroscopy; Lipid interaction **94**, 227

Surfactant partition coefficients; Phosphatidylcholine liposomes; *N*-dodecyl-*N*,*N*-dimethylbetaine; Permeability alterations and bilayer solubilization; Carboxyfluorescein release; Static light-scattering changes; Effective surfactant to lipid molar ratios **94**, 71

Surfactant partition coefficients; Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Influence of ceramides in stratum corneum lipid liposomes alterations; Carboxyfluorescein release; Surfactant/stratum corneum lipid molar ratios **94**, 181

Surfactant/stratum corneum lipid molar ratios; Stratum corneum lipid liposomes; Sodium dodecyl sulfate; Stratum corneum lipid liposomes/sodium dodecyl sulfate interactions; Influence of ceramides in stratum corneum lipid liposomes alterations; Carboxyfluorescein release; Surfactant partition coefficients **94**, 181

Tetraether lipid; *Thermoplama acidophilum*; Calorimetry; Differential thermoanalysis **94**, 1

Thermodynamics; Phospholipids; Branched chains; Monolayers; Structures; X-ray investigations **94**, 251

Thermoplama acidophilum; Tetraether lipid; Calorimetry; Differential thermoanalysis **94**, 1

α-Tocopherol; EPR; Low-density lipoprotein; Oxidation; Oxygen consumption **94**, 63

Transition enthalpy; *N*-acylethanolamine; Phase transition; Transition entropy; Chainlength dependence; Differential scanning calorimetry; Lipid membrane **94**, 43

Transition entropy; *N*-acylethanolamine; Phase transition; Transition enthalpy; Chainlength dependence; Differential scanning calorimetry; Lipid membrane **94**, 43

Tubule; Giant vesicles; Diacetylene; Phospholipid; Optical microscopy **94**, 53

X-ray diffraction; Phase behaviour; Calcium; Cholesterol; Membrane fusion; FT-IR spectroscopy **94**, 97

X-ray investigations; Phospholipids; Branched chains; Monolayers; Thermodynamics; Structures **94**, 251
